Executive Summary

Project Title
BharatKart Sales Intelligence Dashboard

Domain
Business Intelligence | Retail Analytics | Data Visualization

Tool Used

- Microsoft Power BI
- Power Query
- DAX (Data Analysis Expressions)
- CSV Dataset

Project Overview

In today's competitive e-commerce industry, organizations generate large volumes of transactional data every day. Transforming this raw data into meaningful business insights is essential for improving operational efficiency and supporting strategic decision-making.

The objective of this project was to develop an interactive Power BI dashboard capable of monitoring and analyzing online sales performance across India. The dashboard provides a centralized view of key business metrics, enabling users to evaluate sales trends, profitability, customer purchasing behavior, regional performance, and payment preferences.

The project demonstrates the complete Business Intelligence workflow, including data cleaning, transformation, modeling, visualization, and business storytelling.

Problem Statement

E-commerce businesses often struggle to analyze large volumes of sales data spread across multiple locations and product categories.

Without an interactive reporting system, decision-makers face challenges in:

- Tracking sales performance
- Identifying profitable products
- Monitoring regional performance
- Understanding customer purchasing patterns
- Comparing payment preferences
- Making data-driven business decisions
-

This project addresses these challenges by creating an interactive Power BI dashboard that transforms raw sales data into actionable insights.
